Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Single-Crystal Diamond Detector competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A Single-Crystal Diamond Detector (SCDD) is a high-performance solid-state radiation detector made from single-crystal synthetic diamond, typically grown by Chemical Vapor Deposition (CVD). Because diamond has exceptional electronic, thermal, and radiation-hard properties, SCDDs are used for detecting charged particles, X-rays, gamma rays, UV photons, and high-energy ion beams in environments where conventional semiconductor detectors (e.g., silicon, germanium) cannot operate reliably. In 2024, global Single-Crystal Diamond Detector sales volume reached approximately 57.1 k units, with an average global market price of around 2810 US\$ per unit. The Single-Crystal Diamond Detector (SCDD) industry chain begins upstream with the production of ultra-high-purity single-crystal diamond substrates, primarily grown by chemical vapor deposition (CVD) using microwave plasma reactors. This stage requires highly specialized equipment, high-purity carbon precursors, vacuum systems, and growth technologies controlled by a small number of suppliers. Upstream also includes electrode metallization materials (Ti/Pt/Au), photolithography processes, and packaging substrates for detector assembly. The midstream segment consists of detector chip fabrication—diamond polishing, doping control, defect reduction, electrode deposition, device patterning, and encapsulation—followed by integration of readout electronics and signal-processing ASICs. This is dominated by advanced semiconductor and sensor manufacturers serving high-energy physics, synchrotron facilities, medical dosimetry, aerospace, and industrial radiation-monitoring markets. The downstream segment includes system integrators and end-users such as particle accelerators (CERN, KEK, DESY), synchrotron beamlines, XFEL facilities, radiotherapy equipment manufacturers,

nuclear instrumentation companies, aerospace agencies, and industrial NDT providers, which embed SCDDs into beam monitors.

The global Single-Crystal Diamond Detector market size was estimated at USD 161.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.70% during the forecast period.
