## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Single-Crystal Lithium Niobate Thin Films competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Single-Crystal Lithium Niobate (LiNbO<sub>3</sub>, LN) Thin Film refers to a lithium niobate single crystal layer with a thickness of 300~900nm manufactured on a silicon substrate material using the Smart-cut process. Such a structure is named Lithium Niobate-On. Insulator or LNOI to emphasize the analogy to SOI. This structure combines the excellent optical and electro-optical properties of lithium niobate with the advantages of the insulator substrate, such as better isolation and potential for integration with other semiconductor devices. Single-Crystal Lithium Niobate Thin Films market is highly concentrated, with the world's top three manufacturers accounting for approximately 98.0% of the market share. Among them, Jinan Jingzheng Electronics (NANOLN) is the largest producer in the industry, accounting for more than 90% of the global revenue share. Single-Crystal Lithium Niobate Thin Films market is an emerging industry. Currently, there are only a handful players in the global market. However, many domestic and foreign companies are actively investing in R&D and production Single-Crystal Lithium Niobate Thin Films, and competition will become increasingly fierce. In terms of size, the current market is dominated by 3-6 inch products. With the maturity of technology and the R&D investment of manufacturers, large-size products above 8 inches are expected to gradually occupy the market because they can reduce device costs by 40% and improve integration. The demand for Single-Crystal Lithium Niobate Thin Films is driven by 5G optical communications, AI computing infrastructure, quantum communications and other fields. The challenge is that the core process is still monopolized by a few companies, and the 8-inch wafer bonding yield needs to be improved.

The global Single-Crystal Lithium Niobate Thin Films market size was estimated at USD 74.3 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 33.40% during the forecast period.
