Abstracts

Single domain antibody (sdAb) refers to a type of antibody that lacks the light chain of an antibody and only has the variable region of the heavy chain. Because of its small molecular weight, it is also called a nanobody. Although single domain antibodies have a simple structure, they can still achieve an affinity for binding to specific antigens that is comparable to or even higher than that of traditional antibodies. Compared with traditional antibodies, single domain antibodies have the advantages of small molecular weight, strong stability, and easy recombinant expression. sdAb is a promising next-generation therapeutic antibody technology that can be used for cancer immunotherapy and other applications.

The global Single Domain Antibody Library Service market size was estimated at USD 185.5 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 12.45% during the forecast period.
