Abstracts

A single-domain heavy chain antibody is a type of antibody consisting of only one variable domain derived from the heavy chain of a traditional antibody. Unlike conventional antibodies that are composed of both heavy and light chains, single-domain antibodies (sdAbs) are smaller and more stable. These antibodies are derived from the variable regions of heavy chain antibodies found in camelids (such as camels and alpacas) and can be used in various applications, including diagnostics, therapeutics, and research, due to their high specificity, stability, and ability to bind to targets that conventional antibodies cannot.

The global Single-Domain Heavy Chain Antibody market size was estimated at USD 1282.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.90% during the forecast period.
