Abstracts

The development trend of single dome halogen operating lamps is towards more advanced and efficient lighting technology. LED (Light Emitting Diode) technology is rapidly replacing traditional halogen lamps in operating rooms. LED lights offer several advantages such as longer lifespan, energy efficiency, and better color rendering. They also generate less heat, reducing the risk of burns during surgeries. Modern operating lamps are equipped with adjustable lighting features, allowing surgeons to control the intensity and focus of the light. This helps in enhancing visibility during complex procedures and reduces eye strain. Operating lamps are now being designed with easy-to-clean surfaces and materials that can withstand sterilization processes. This ensures a hygienic environment in the operating room and reduces the risk of infections.

The global Single Dome Halogen Operating Lamp market size was estimated at USD 1086.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.60% during the forecast period.
