Abstracts

A single door magnetic lock, also known as a maglock, is an electromagnetic locking device designed to secure a single door by utilizing a powerful electromagnet mounted on the door frame and an armature plate attached to the door itself; when energized, the electromagnet generates a strong magnetic field that holds the armature plate firmly in place, effectively locking the door until power is intentionally cut, either through a manual switch, access control system, or emergency release mechanism, allowing for fail-safe operation in compliance with safety regulations. These locks are valued for their high holding force, reliability, and compatibility with integrated security systems, making them a common choice for both commercial and institutional applications where controlled access and robust security are priorities.
