## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Single-Ended Active Probes competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A single-ended active probe is an oscilloscope probe that requires external power supply. Its core structure includes a high-bandwidth amplifier, which actively amplifies the signal to reduce the load effect while providing high bandwidth and low distortion characteristics, making it suitable for high-frequency signal measurement. Compared with passive probes, its advantage is that it balances the contradiction between high input impedance and high bandwidth.

The global Single-Ended Active Probes market size was estimated at USD 76.7 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.00% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Single-Ended Active Probes market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights. It examines market size, competitive landscape, emerging development trends, niche segments, key drivers and challenges, as well as conducts SWOT and value chain analyses.
