Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Single Flange Differential Pressure Transmitter competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global sales of single-flange differential pressure transmitters reached 5.2 million units, with an average selling price of \$620 per unit. Single-flange differential pressure transmitters are precision process instruments used to measure liquid level, density, pressure, and flow. They directly contact the media through a flange interface, achieving stable differential pressure signal transmission. They offer high pressure resistance, vibration resistance, and corrosion resistance, making them widely used in industries such as petrochemicals, power generation, metallurgy, water treatment, and papermaking. Key upstream raw materials include 316L stainless steel, Hastelloy alloy, silicon piezoresistive cores, electronic circuit boards, and sealing O-rings. Key suppliers include Kobelco, Sumitomo Electric Industries, Ltd., CeramTec, Texas Instruments (TI), and Murata Manufacturing Co., Ltd. Global production capacity is approximately 5.8 million units per year, with an average industry gross profit margin of approximately 35%. Downstream consumption is driven by petrochemicals (45%), power and energy (25%), water treatment and environmental protection (20%), and other industrial processes (10%). Among upstream materials, stainless steel and silicon cores together account for approximately 61% of manufacturing costs. In the future, this product will develop towards intelligence, remote diagnosis, and high-temperature and high-pressure adaptation to support the deep integration of Industry 4.0 and digital energy management.

The global Single Flange Differential Pressure Transmitter market size was estimated at USD 3224.0 million in 2025 and is projected to grow at a compound annual growth rate

(CAGR) of 5.40% during the forecast period.
