## Abstracts

Single-Flow Zinc-Nickel Battery is a new type of recyclable heavy metal redox battery. It generates electrical energy through chemical reactions in liquid electrolytes. It has the characteristics of high efficiency, high durability, high safety and environmental protection. It has broad application prospects in energy storage, power generation, heat storage and other fields. Due to its high power generation efficiency, low environmental pollution, and easy construction, fuel cells have become the fourth generation power generation technology after hydraulic power, thermal power, and nuclear power. They have broad prospects for future development. Many countries have successively introduced relevant policies to guide and facilitate related development. . Japan's Ministry of Economy, Trade and Industry (METI), the U.S. Department of Energy (DOE), and the European Commission's Directorate-General for Energy (ENER) reached an agreement to form hydrogen energy and fuel cell technology cooperation at the 2019 Group of Twenty (G20) Energy and Environment Ministerial Meeting. The intention of the alliance means that countries will promote the development of fuel cells from multiple angles and continue to strengthen the construction and cooperation of hydrogen energy and fuel cells in the world. The demand for renewable energy continues to expand. According to data from the company's "Fuel Cell Research", by the end of 2022, global renewable energy power generation capacity has reached 3,300 GW, and the stock has increased by a record 295 GW. Data from the China Energy Administration shows that in 2022, China's renewable energy power generation will reach 2.7 trillion kilowatt-hours, accounting for 31.6% of the entire society's electricity consumption, an increase of 1.7 percentage points from 2021, which is equivalent to reducing domestic carbon dioxide emissions by approximately 2.26 billion. Ton.
