### Report Overview

Single-frequency Bioimpedance Device is a device used to estimating body composition, and in particular body fat. Bioelectrical impedance analysis (BIA) actually determines the electrical impedance, or opposition to the flow of an electric current through body tissues which can then be used to estimate total body water (TBW), which can be used to estimate fat-free body mass and, by difference with body weight, body fat.

The global Single Frequency Bioimpedance Devices market size was estimated at USD 125.45 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.85% during the forecast period.
