Report Overview:

A single-gun split DC charging pile is a type of charging infrastructure for electric vehicles that is divided into separate components and features a single charging gun or connector. It typically includes a power module and a charging interface module. The power module converts AC power into DC power and is usually installed in a centralized location. The charging interface module, which is equipped with a single charging gun, is installed at the charging point where electric vehicles can connect to charge. This split design allows for efficient management and maintenance of the power module while providing a dedicated charging interface for one vehicle at a time. Single-gun split DC charging piles facilitate convenient and reliable charging for electric vehicles, supporting their charging needs in a practical manner.
