The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Single Hinge Expansion Joint competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Single-hinged expansion joint is a special type of expansion joint that is mainly used to compensate for pipeline displacement due to thermal expansion or contraction. Compared with traditional expansion joints, single-hinge type expansion joints use hinge structure to achieve multi-directional free displacement of the pipeline, which has better shock resistance, torque resistance and greater adaptability. The single-type hinge expansion joint consists of a corrugated pipe and a structural component such as a pin, hinge plate and wall plate. It can only absorb angular displacement in a plane and can withstand the pressure and thrust of the bellows. Connection form: welding connection, flange connection. In 2024, global Single Hinge Expansion Joint production reached approximately 591 k units, with an average global market price of around US\$ 635 per unit.
