Abstracts

Single Hook Breast Localization Needle is a medical device used during breast localization procedures, particularly in the case of non-palpable breast lesions or tumors. It consists of a fine, hollow needle with a single small hook at the tip. This device is inserted into the breast under guidance from imaging techniques such as mammography or ultrasound. Once positioned near the lesion, the hook is deployed, allowing it to capture and secure the tissue. This localization technique helps guide surgeons during breast surgery, ensuring precise removal of the targeted lesion while minimizing damage to healthy breast tissue.
