### Report Overview:

PID Temperature Regulators is a control loop mechanism employing feedback that is widely used in industrial control systems and a variety of other applications requiring continuously modulated control. The temperature controller takes an input from a temperature sensor and has an output that is connected to a control element. A PID controller continuously calculates an error value  $e(t)$  as the difference between a desired setpoint (SP) and a measured process variable (PV) and applies a correction based on proportional, integral, and derivative terms (denoted P, I, and D respectively). Single loop controllers are used to control a thermal or process machine in systems which need a single control loop or discrete devices.

The Global Single Loop PID Temperature Regulator Market Size was estimated at USD 432.43 million in 2023 and is projected to reach USD 817.61 million by 2029, exhibiting a CAGR of 11.20% during the forecast period.
