## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Single-mode and Multi-mode Laser Diodes competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Single-mode and multi-mode laser diodes are types of semiconductor lasers classified according to their transverse or longitudinal mode structures. Single-mode laser diodes only work in one transverse or longitudinal mode, with high output beam quality, small divergence angle, and are suitable for long-distance high-precision applications; multi-mode laser diodes allow multiple modes to exist at the same time, with high output power but low beam quality, and are suitable for close-range lighting, material processing and other scenarios. There are significant differences between the two in terms of beam characteristics, application areas, structural design and manufacturing costs.

The global Single-mode and Multi-mode Laser Diodes market size was estimated at USD 1221.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.10% during the forecast period.
