Abstracts

Single-mode polarization-maintaining fiber is a type of optical fiber that is usually used to transmit optical signals and has the property of maintaining the polarization state of the signal. As the demand for digital data and high-definition video transmission continues to increase, single-mode polarization-maintaining optical fiber will face higher bandwidth requirements. Therefore, one of the future development trends is to develop higher-bandwidth polarization-maintaining optical fibers to meet the growing demand for data transmission. Several studies are exploring multimode polarization-maintaining fibers to expand their application areas. Multimode polarization-maintaining fiber can support multiple polarization modes and has the potential to be used in more complex optical systems.

The global Single Mode Polarization Maintaining Fiber market size was estimated at USD 2104.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 13.90% during the forecast period.
