## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Single-Mode Ultra-Low Loss MPO competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The single-mode ultra-low-loss MPO connector is a high-performance fiber optic connector based on a multi-core fiber array, specifically designed to meet the demands of ultra-high-speed, high-bandwidth, and long-distance optical transmission. Compared to conventional single-mode low-loss MPO connectors, it offers lower insertion loss (typically  $\approx 0.35$  dB, with some high-quality products reaching as low as 0.2 dB), enabling higher transmission quality and longer transmission distances in optical modules and links operating at 400G/800G and higher data rates. It is widely used in scenarios such as hyperscale data centers, high-speed optical transmission networks, cloud computing, and AI computing interconnection, and is a core component of next-generation optical communication systems. In terms of the upstream and downstream supply chains, the upstream sector primarily includes fiber preform and fiber manufacturers (providing single-mode fiber), ceramic or polymer composite materials (for MT ferrules), suppliers of high-precision molds and grinding and polishing equipment, and basic raw materials such as high-performance glues, coatings, and cleaning materials. The midstream sector comprises MPO connector manufacturers and assemblers, achieving ultra-low loss performance through precision ferrule processing, fiber alignment, and end-face polishing. The downstream sector encompasses data center operators, telecom operators, cloud service providers, AI computing infrastructure builders, as well as high-speed optical modules, MTP/MPO patch panels, and fiber cabling system integrators, promoting their widespread adoption in the world's next-generation information infrastructure. In 2024, global production of single-mode ultra-low-loss MPO connectors reached 7,149,000 units, with an average selling price of

US\$11.65 per unit. Production capacity is expected to be 9,929,000 units, with a capacity utilization rate of 72% and a gross profit margin of 35%.

The global Single-Mode Ultra-Low Loss MPO market size was estimated at USD 83.29 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.80% during the forecast period.
