### Report Overview:

PID Temperature Regulators is a control loop mechanism employing feedback that is widely used in industrial control systems and a variety of other applications requiring continuously modulated control. The temperature controller takes an input from a temperature sensor and has an output that is connected to a control element. A PID controller continuously calculates an error value  $e(t)$  as the difference between a desired setpoint (SP) and a measured process variable (PV) and applies a correction based on proportional, integral, and derivative terms (denoted P, I, and D respectively).

The Global Single and Dual Loop PID Temperature Regulators Market Size was estimated at USD 940.29 million in 2023 and is projected to reach USD 1777.83 million by 2029, exhibiting a CAGR of 11.20% during the forecast period.
