Abstracts

Single parameter water test strips are simple and convenient tools used to quickly measure specific water quality parameters. These strips typically contain test pads or reagent-impregnated paper strips that change color in response to the concentration of a particular chemical or ion in the water. Users can then compare the color changes to a color chart provided by the manufacturer to determine the concentration of the target parameter. These strips are commonly used for various applications, including testing water in pools, aquariums, spas, drinking water, and environmental monitoring.

The global Single Parameter Water Test Strip market size was estimated at USD 150.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
