Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Single-Phase Low Voltage AC Coupled Inverter competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, production of single-phase low-voltage AC-coupled inverters reached 142,500 units, with an average selling price of US\$720 per unit. The annual production capacity of single-phase high-voltage energy storage inverters is approximately 10,000 units per line, with a gross profit margin of approximately 33.5%. A single-phase low-voltage AC-coupled inverter is a type of inverter used in small to medium-sized distributed energy systems. Its core feature is to convert DC power (typically from batteries or other energy storage units operating in the low-voltage range) into AC power through inversion, and then couple and interact with the load and the grid through the AC side. Compared to DC coupling, AC coupling typically uses AC power transmission and grid connection at certain stages of the system. The upstream raw materials for single-phase low-voltage AC-coupled inverters include low-voltage DC input and protection components, power electronics and conversion core components, and battery management and energy management components. The midstream segment comprises single-phase low-voltage AC-coupled inverter manufacturers, while the downstream segment primarily targets residential, commercial, and small industrial applications.

The global Single-Phase Low Voltage AC Coupled Inverter market size was estimated at USD 103.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.30% during the forecast period.
