## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Single-Phase Pressure Switch competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A single-phase pressure switch is a device used in single-phase circuits to control the on/off state of the circuit by monitoring the system pressure. When the measured pressure reaches the preset value, the switch automatically switches the circuit state (such as on or off), thereby achieving automatic pressure control of single-phase equipment (such as small air compressors and water pumps). It has the characteristics of simple structure and adaptability to single-phase power supply systems.

The global Single-Phase Pressure Switch market size was estimated at USD 4091.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Single-Phase Pressure Switch market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
