## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Single-phase Shaded Pole AC Motor competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Single-phase Shaded Pole AC Motor, also known as shaded pole motor or shaded pole motor, is a single-phase AC asynchronous motor. It usually adopts cage-type skewed slot cast aluminum rotor and is composed of rotor and stator. The rotor includes shaft, rotor core, rotor winding, etc.; the stator includes base, stator coil, stator core, etc. The single-phase shaded pole AC motor generates a rotating magnetic field through the short-circuit ring (winding) on the stator magnetic pole, so that the rotor can realize self-starting operation. The core feature is that it does not require starting capacitor or centrifugal switch, and only relies on the spatial phase difference between the main winding and the shaded pole winding to generate starting torque. It is widely used in small machinery, instruments and equipment, household appliances and other fields.

The global Single-phase Shaded Pole AC Motor market size was estimated at USD 611.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.80% during the forecast period.
