## Abstracts

A single-phase vacuum cleaner is a type of vacuum cleaner that operates on a single-phase electrical power supply. It is commonly used for household cleaning purposes and is designed to remove dirt and debris from various surfaces such as floors, carpets, and upholstery. Single-phase vacuum cleaners typically consist of a motor, a suction system, a dust collection bag or container, and various attachments and accessories for different cleaning tasks. The motor generates suction power, which pulls in air along with dirt and dust particles. The collected dirt and debris are then stored in the dust collection bag or container. These vacuum cleaners are usually lightweight and portable, making them easy to maneuver and carry around the house. They are available in different sizes and power ratings to suit different cleaning needs. Some models may also come with additional features such as adjustable suction power, HEPA filters for improved air quality, and specialized attachments for specific cleaning tasks.

The global Single-phase Vacuum Cleaner market size was estimated at USD 4082.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.60% during the forecast period.
