Report Overview

The single-phase welder market caters to small-scale welding operations, residential use, and light industrial applications where three-phase power is unavailable or impractical. These machines operate on standard 120V or 240V AC power, making them accessible for DIY enthusiasts, automotive repair shops, and contractors working on-site. Demand is driven by their portability, affordability, and ease of use compared to industrial three-phase models. Key segments include stick welders (SMAW), MIG welders (GMAW), and TIG welders (GTAW), with MIG variants dominating due to their versatility in handling thin metals and faster operation. Growth is fueled by expanding construction activities, rising automotive repair needs, and the proliferation of small fabrication businesses. However, limitations in power output (typically under 200 amps) restrict heavy-duty applications, creating competition from inverter-based models that offer improved efficiency and lightweight designs. Regional adoption varies, with emerging markets favoring budget-friendly transformer-based units, while developed economies shift toward advanced inverter technologies with precision controls. The aftermarket for consumables (electrodes, shielding gas) and accessories further sustains revenue streams for manufacturers.

The global Single Phase Welder market size was estimated at USD 165.38 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
