Abstracts

Single-polarization fibers are a type of specialty optical fiber that are designed to transmit light only in a specific polarization direction. In these fibers, light in other polarization directions either does not meet the guiding conditions or experiences significant optical loss. This unique property makes single-polarization fibers ideal for applications requiring precise polarization control, such as in high-performance fiber optic communication systems and sensing technologies.

The global Single-polarization Fibers market size was estimated at USD 149.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.70% during the forecast period.
