Abstracts

A single punch tablet press, also known as an eccentric or single station press, is a mechanical device used primarily in pharmaceutical, nutraceutical, and chemical industries to compress powdered or granular materials into solid tablets of uniform size, shape, and weight through the application of high pressure via a single set of upper and lower punches and a die cavity, making it particularly suitable for small-scale production, research and development, and low-volume manufacturing due to its simplicity, ease of operation, and lower cost compared to rotary tablet presses.
