Abstracts

A single row screw conveyor is a mechanical system designed for the horizontal, inclined, or vertical movement of bulk materials through a trough using a rotating helical screw or auger, typically driven by an electric motor. It is characterized by its single, continuous flighting (spiral blade) wrapped around a central shaft, which efficiently transports materials such as grains, powders, granules, and semi-solids in industries including agriculture, food processing, mining, wastewater treatment, and chemical manufacturing. The design prioritizes simplicity, space efficiency, and cost-effectiveness for applications requiring steady, controlled material flow over short to medium distances, with variations in screw pitch, diameter, and trough design tailored to specific material properties and handling requirements.

The global Single Row Screw Conveyor market size was estimated at USD 280.42 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.65% during the forecast period.
