Abstracts

A single-seat gyrocopter is a type of rotorcraft that uses an unpowered rotor in autorotation to generate lift and an engine-powered propeller for thrust. It is characterized by its compact size, lightweight design, and open or semi-enclosed cockpit, offering an affordable and accessible form of personal aviation. Unlike helicopters, gyrocopters cannot hover but are capable of short takeoff and landing (STOL), operate effectively at low speeds, and are known for their safety due to inherent stability in autorotation. These aircraft are primarily used for recreational flying, flight training, aerial photography, and surveillance, appealing to aviation enthusiasts seeking a lower-cost alternative to traditional fixed-wing or rotary-wing aircraft.

The global Single Seat Gyrocopter market size was estimated at USD 28.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.75% during the forecast period.
