## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Single-shaft Crusher competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global sales of single-shaft crushers reached 76,000 units, with an average selling price of US\$24,500 per unit. A single-shaft crusher is a type of general-purpose volume reduction equipment using a single rotor as its core, combined with moving blades, fixed blades, a screen, and a hydraulic feeding system. It is used for coarse and fine crushing of solid materials such as plastics, rubber, wood, paper, textiles, electronic waste, and light metals. It features a compact structure, wide applicability, simple maintenance, and controllable output particle size, making it a fundamental piece of equipment in industries such as recycled plastics, waste appliance recycling, hazardous waste disposal, and biomass pretreatment. In upstream material consumption, frame and housing steel account for approximately 58%, blade steel and rotor system for 26%, and motor, reducer, and electrical control for approximately 16%. Global total production capacity is approximately 120,000 units per year, with an average industry gross profit margin between 20% and 27%. In downstream consumption, the recycled plastics industry accounts for approximately 45%, solid waste treatment and recycling companies for approximately 30%, the wood and biomass industry for 15%, and other industrial volume reduction applications for 10%. In terms of demand and business opportunities, the advancement of global solid waste classification policies, the expansion of the plastics recycling industry, the growth of electronic waste, and the increased utilization of biomass energy have led to a steady increase in demand for single-shaft shredders. High-torque, large-rotor, low-speed, high-efficiency shredders are rapidly gaining penetration in the recycling of engineering plastics and thick-walled products. Future prospects lie in: intelligent single-shaft shredders (load monitoring,

automatic feeding), wear-resistant blades and quickly replaceable rotor structures, low-energy direct-drive systems, and high-precision shredders adapted to high-quality rPET and rPP recycling systems, which possess higher added value and greater potential for global market expansion.

The global Single-shaft Crusher market size was estimated at USD 1862.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.10% during the forecast period.
