Abstracts

A Single Shaft Dissolver is a type of industrial mixing equipment used for dissolving, dispersing, and homogenizing solid materials into liquids. It consists of a single shaft equipped with a high-speed rotating impeller or dissolving blade, which generates shear forces to break up solid particles and promote uniform dispersion in the liquid medium. The single shaft design allows for effective mixing of materials in a variety of viscosities, ranging from low to medium viscosity liquids. Single shaft dissolvers are commonly used in industries such as chemicals, paints and coatings, adhesives, and pharmaceuticals, where fast and efficient mixing is required. The high-speed action of the dissolver enables quick dissolution of powders, pigments, or resins into liquids, ensuring a smooth, consistent mixture. These machines are particularly useful for applications requiring low shear mixing, where the integrity of the components must be preserved while achieving uniform distribution of particles.

The global Single Shaft Dissolver market size was estimated at USD 130.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.00% during the forecast period.
