Abstracts

The Single Shield Tunnel Boring Machine (TBM) is an advanced construction equipment used for excavating tunnels in various types of soil or rock formations. Unlike other types of TBMs, the Single Shield TBM has a single shield that surrounds the cutting head. This shield helps to stabilize the tunnel face as the machine bores through the ground. It also contains a conveyor system to remove excavated material from the tunnel. The Single Shield TBM is highly efficient and can be used in a wide range of tunneling projects, including transportation infrastructure, mining, and utility installations. It offers precise control, reduces ground settlement, and increases the speed and safety of tunneling operations.

The global Single Shield Tunnel Boring Machine market size was estimated at USD 1850.42 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
