## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Single-side CCK Release Paper competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Single-side CCK Release Paper is based on kraft paper, which exhibits excellent coating adhesion and surface smoothness. It is first coated with a high-hiding clay layer to improve surface smoothness and printing/coating compatibility. A silicone release agent is then applied to one side and cured to create a single-sided release liner with controllable release force. Single-side CCK Release Paper offers excellent stiffness, smoothness, tensile strength, high-temperature resistance, stable peel strength, and is environmentally friendly. It is a green, high-end silicone release paper. The core upstream component is all-wood pulp kraft paper (base material), as well as clay and silicone release agents. Base paper is centrally supplied by paper mills, and its quality directly impacts coating consistency and final release performance. In recent years, with the expansion of downstream industries such as die-cutting, adhesives, and protective films, and the resulting demand for higher peel consistency, cleanliness, and surface smoothness, CCK's single-side release paper has continuously upgraded its product formulation, coating process, and dimensional control. Global sales in 2024 is expected to be approximately 7,035 million square meters, with an average market price of approximately US\$41 per thousand square meters. Major industry players will have gross profit margins ranging from 15% to 30%. Annual production capacity for a single production line is estimated to be 40?120 million square meters.

The global Single-side CCK Release Paper market size was estimated at USD 281.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.00% during the forecast period.
