### Report Overview:

Single-sided polishing machine is a kind of polishing machine, mainly used for flat polishing. It is different from round tube polishing, concave and convex surface polishing, etc. It is a product for workpieces that can be flat polished. Single-sided polishing machine refers to ultra-precision processing of flat workpieces to remove scratches, spots, and depressions on the surface of the workpiece, making the surface of the workpiece bright, smooth, mirror-like, and even reaching a precision roughness value. The principle of the single-sided polishing machine is to drive the grinding disc to rotate through the engine, causing friction with the workpiece rotating on the grinding disc.
