Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Single-Sided Double-Layer Aluminum Substrate competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global production of single-sided, double-layer aluminum substrates reached 301 million units, with an average selling price of \$4.20 per unit. The annual production capacity of a single-line production line for single-sided, double-layer aluminum substrates is approximately 1.5 million units, with a gross profit margin of approximately 27.35%. Single-sided, double-layer aluminum substrates typically feature two layers of circuitry on a single aluminum substrate, but these two layers are formed only on one side. The other side is typically left blank, used for heat dissipation, or for alignment/auxiliary functions. Compared to "standard double-sided aluminum substrates," the key difference is that both conductive layers remain on the same side.

The global Single-Sided Double-Layer Aluminum Substrate market size was estimated at USD 1275.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.30% during the forecast period.
