Abstracts

Single-sided FPC, also called single-layer FPC, means that only one side of the printed circuit board is printed with electronic circuits with conductive materials. It uses single-sided PI copper clad laminate, generally rolled copper foil, chemically etched conductive patterns, and then covered with a layer of covering film after the circuit is completed (strictly speaking, single-sided flexible PCB can be manufactured with or without a cover layer or other protective coating. The cover layer or protective layer plays the role of protecting the circuit, usually located on the top layer of the flexible circuit), forming a flexible circuit board with only a single layer of conductors. Single-sided flexible circuit board cover film is a kind of covering material used in the manufacture of flexible circuit boards. Flexible circuit board is a circuit board made of flexible substrate, which has good flexibility and bendability, and is suitable for applications that require curved surface design or space constraints. The cover film is a layer of material used to protect the circuit lines, connectors and components of the flexible circuit board to prevent the circuit from being exposed to the external environment. Single-sided flexible circuit board cover film refers to the covering material used on one side of the flexible circuit board. It is usually a polymer film, such as polyimide (PI) film, which has insulating properties and high temperature resistance. The cover film can wrap the circuit lines and connection points to prevent physical damage and the influence of the external environment. Coverlays have insulating properties that provide electrical isolation between circuits. A cover film can add mechanical strength to a flex circuit board, making it more durable and able to withstand bending and folding. The cover film can also cover the pads to prevent the molten material from contaminating the circuit during soldering.

The global Single Sided FPC Coverlay market size was estimated at USD 506.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.80%
