Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Single Silver LOW-E Glass competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Single Silver LOW-E Glass production reached approximately 17.01 million Sq m, with an average global market price of around US\$ 100 per Sq m. Single-silver Low-E glass is a low-emissivity functional glass with a single layer of silver film deposited on the glass surface. It effectively reflects infrared rays and reduces heat conduction, while maintaining high visible light transmittance and offering some UV blocking capabilities. This glass is widely used in building energy-saving applications (such as curtain walls, windows, and skylights), automotive applications (such as skylights, side windows, rear windshields, and head-up display (HUD) areas), and some industrial and smart electronic products (such as display panels, temperature-controlled glass, and electrically heated glass). Single-silver Low-E glass boasts relatively low cost and a simple manufacturing process, and offers significant advantages in energy conservation, thermal insulation, UV protection, and intelligent dimming. With rising building energy-saving standards and the development of new energy smart vehicles, demand for its application continues to grow. The upstream industry for single-silver Low-E glass includes glass substrate manufacturers (such as Fuyao Glass, AGC, NSG, and Saint-Gobain) and silver target and paste suppliers (Materion and Heraeus). The midstream industry comprises single-silver Low-E glass manufacturers (such as Fuyao Glass, AGC Automotive, and Saint-Gobain), responsible for coating, tempering, laminating, and functionalization. Downstream users include the construction industry (curtain wall glass factories and architectural decoration companies), automotive manufacturers and glass system integrators (such as Mercedes-Benz, BMW, and Tesla), as well as industrial and electronics manufacturers (such as smart display

screens, temperature-controlled glass factories, and electrically heated glass users). With the global trend toward energy-saving buildings and intelligent new energy sources, the market potential for single-silver Low-E glass continues to grow. The annual production capacity of a single-line single-silver LOW-E glass is approximately 170k square meters, with a gross profit margin of approximately 15%-25%.

The global Single Silver LOW-E Glass market size was estimated at USD 1702.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.20% during the forecast period.
