Abstracts

Single stage isolators are specialized containment devices designed to provide a physical barrier between the operator and the process, primarily used in pharmaceutical, biotechnology, and research environments to handle hazardous substances, sensitive materials, or aseptic products; they consist of a rigid enclosure with built-in gloves, high-efficiency particulate air (HEPA) filtration for air supply and exhaust, and often incorporate pass-through chambers, ensuring operator protection and product integrity by maintaining strict environmental control, such as ISO 5 cleanliness, without the complexity or cost of multi-stage isolator systems.
