Abstracts

Single Station Thermoforming Machine is a kind of plastic processing equipment, which is used to heat and soften plastic sheets or coils, and then shape them into products of various shapes through vacuum adsorption or air pressure. A single-station thermoforming machine usually consists of a heating system, a vacuum system, a forming mold, and a control system. During processing, the plastic sheet or coil is first placed on a forming mold, and the mold is heated to a certain temperature to soften the plastic. Then, the plastic sheet or roll is formed into the desired product shape by vacuum suction or air pressure. Finally, the molded product is cooled and shaped by the cooling system, and taken out.

The global Single Station Thermoforming Machine market size was estimated at USD 98.78 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 3.20% during the forecast period.
