Report Overview

Single-use Bioprocessing Equipment refers to biopharmaceutical manufacturing (bioprocessing) equipment designed to be used once (or for a single manufacturing campaign) and then discarded. Generally, SUS equipment is composed primarily of plastic components that have been sealed and sterilized using gamma irradiation. The primary benefits of SUS versus classic stainless steel (or glass less frequently used in bioprocessing) is that the equipment comes sterile, allowing avoidance of cleaning, sterilization and validation of sterilization prior to usage; and avoidance of related complex steam, WFI, and other plumbing installed throughout bioprocessing facilities with large fixed stainless steel components.

This report provides a deep insight into the global Single-use Bioprocessing Equipment market covering all its essential aspects. This ranges from a macro overview of the market to micro details of the market size, competitive landscape, development trend, niche market, key market drivers and challenges, SWOT analysis, value chain analysis, etc.
