Abstracts

Single-use Bioprocessing Equipment refers to biopharmaceutical manufacturing (bioprocessing) equipment designed to be used once (or for a single manufacturing campaign) and then discarded. Generally, SUS equipment is composed primarily of plastic components that have been sealed and sterilized using gamma irradiation. The primary benefits of SUS versus classic stainless steel (or glass less frequently used in bioprocessing) is that the equipment comes sterile, allowing avoidance of cleaning, sterilization and validation of sterilization prior to usage; and avoidance of related complex steam, WFI, and other plumbing installed throughout bioprocessing facilities with large fixed stainless steel components.

The global Single Use Bioprocessing Equipment market size was estimated at USD 12010.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 19.00% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Single Use Bioprocessing Equipment market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
