Abstracts

The market for single-use medical devices encompasses products designed for one-time application in diagnostic, therapeutic, or surgical procedures, intended to be discarded after use to eliminate cross-contamination risks, reduce sterilization costs, and enhance patient safety by preventing healthcare-associated infections. These devices range from simple items like syringes, gloves, and catheters to more complex instruments such as laparoscopic trocars, biopsy forceps, and certain surgical blades, driven by stringent regulatory standards, rising focus on infection control, and increasing surgical volumes globally. Market growth is further influenced by cost-efficiency in healthcare settings, where the expenses associated with reprocessing reusable devices—including labor, equipment, and compliance—often outweigh the convenience and reliability of disposable alternatives, though environmental concerns and waste management challenges present ongoing considerations for industry stakeholders.

The global Single Use Medical Devices market size was estimated at USD 13820.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.45% during the forecast period.
