Report Overview

A single-use mixer is a type of mixing system that is designed for use in biopharmaceutical manufacturing, particularly in the production of vaccines, cell therapies, and other biological products. Unlike traditional mixing systems, which are designed to be reused multiple times, single-use mixers are designed to be used only once, and then discarded. Single-use mixers typically consist of a plastic bag or container that is pre-sterilized and pre-assembled with all the necessary components for mixing, such as impellers, sensors, and tubing. The bag or container is connected to a mixing platform, which controls the speed and intensity of the mixing process.
