Report Overview:

The surgical gown is a kind of garment worn by medical staff, which was originally used in the surgical room, but because it is easy to change and wash, it does not interfere with nursing behavior, let more and more hospitals adopt disposable surgical clothing (including replacing nurses clothing). Even the medical-related industry (veterinarians, midwives, etc.) outside the hospital has begun to use scrubs. Disposable scrubs are simple to design, minimize the possibility of dirt and dirt, have almost no metal parts (zippers, buttons) to avoid pulling and are cheap to make and can be discarded and replaced.

The Global Single-Use Surgical Gowns Market Size was estimated at USD 1220.10 million in 2023 and is projected to reach USD 1482.51 million by 2029, exhibiting a CAGR of 3.30% during the forecast period.
