Abstracts

Single-use trocar system is a medical or veterinary device that is made up of an obturator, a cannula, and a seal. The market drivers for Single-Use Trocar System include the following: The increasing demand for laparoscopic surgery, which offers advantages such as less pain, faster recovery, fewer complications, and better cosmetic outcomes compared to open surgery. The rising prevalence of chronic diseases such as obesity, diabetes, and cardiovascular diseases, which require surgical interventions such as bariatric surgery, hernia repair, and cholecystectomy. The growing awareness and preference for contactless and hygienic solutions amid the COVID-19 pandemic, which has boosted the demand for single-use trocar systems as a way to prevent cross-contamination and infection. The innovation and development of new and advanced single-use trocar systems that offer features such as bladeless tips, optical visualization, self-sealing valves, and ergonomic designs. The constraints of Single-Use Trocar System include the following: The high initial cost of single-use trocar systems, which may deter some potential customers from investing in them. The lack of standardization and interoperability among different single-use trocar systems, which may limit the compatibility and scalability of laparoscopic solutions across different regions and sectors. The environmental impact of single-use trocar systems, which generate more waste and greenhouse gas emissions than reusable trocar systems, according to a life cycle assessment study. The technical challenges and limitations of single-use trocar systems, such as insertion force, tissue damage, leakage, and durability, which may affect the performance and safety of laparoscopic surgery. The future opportunities for Single-Use Trocar System include the following: The development of new and improved single-use trocar systems that overcome the existing challenges and limitations of single-use trocar systems, such as flexible printing options, advanced antenna design, signal processing techniques, frequency band selection, data encryption methods, and smart-sensing capabilities. The expansion of single-use trocar systems into new and

emerging domains such as robotic surgery, natural orifice transluminal endoscopic surgery (NOTES), and single-port laparoscopic surgery (SPLS), which require specialized and customized trocar systems. The creation of new business models and value propositions based on single-use trocar systems, such as pay-per-use services, real-time data analytics, personalized marketing and customer loyalty programs, asset optimization and utilization, and predictive maintenance and repair.

The global Single-Use Trocar System market size was estimated at USD 854.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
