Abstracts

Single-use valves add ease and disposability to traditional valve formats. Single Use diaphragm Valves are shut-off valves that use diaphragms as opening and closing elements to close the flow path, cut off fluid, and separate the internal cavity of the valve body from the internal cavity of the valve cover. This valve eliminates the burden of manual cleaning and reprocessing of difficult-to-clean parts, while providing excellent performance. Single-use Pinch Valves (PV) are non-product contact valves matched to use on existing tubing to provide flow control and automation. Global key players of Single Use Valves include GEMU Group, Emerson, Repligen, Repligen, DrM, Equibar, etc. The top five players hold a share about 62%. Europe is the largest market and has a share about 46%, followed by North America and Asia-Pacific(excluding China), with share 37% and 8%, separately. In terms of product type, Pinch Valves is the largest segment, occupied for a share of 69%. In terms of application, Pharmaceutical Industry is the largest, which has a share about 49 percent.

The global Single Use Valves market size was estimated at USD 89.7 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.30% during the forecast period.
