Abstracts

A single wafer wet stripper is a semiconductor manufacturing equipment used in the photolithography process for removing photoresist and other residues from individual silicon wafers after etching, implantation, or other fabrication steps. It utilizes chemical baths, typically involving solvents or acid-based solutions, along with mechanical actions such as megasonic or ultrasonic agitation, to clean the wafer surface without damaging delicate structures. Unlike batch processing systems that handle multiple wafers simultaneously, single wafer systems process wafers one at a time, offering superior process control, uniformity, and reduced risk of cross-contamination, making them particularly suitable for advanced technology nodes where precision and yield are critical.

The global Single Wafer Wet Stripper market size was estimated at USD 180.25 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.45% during the forecast period.
