## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Single Wire Profiling Saw competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global sales of single-wire profiling saw will reach approximately 4,200 units, with an average price of approximately US\$28,000 per machine and an industry average gross profit margin of between 28% and 32%. Single-wire profiling saws are specialized stone processing equipment that utilize a single diamond wire for cutting and contouring. They are capable of high-precision linear cutting and shaping of slabs such as marble, granite, and artificial stone. Due to their high efficiency, narrow kerf, and low material loss, they are widely used in architectural decoration, stone crafts, and tombstone manufacturing. The upstream market primarily relies on the supply of key components such as diamond wire, wear-resistant guide wheels, motors, and CNC systems; the downstream market serves stone mines, stone processing plants, and decorative engineering companies. For example, the renowned European manufacturer THIBAUT has an annual production capacity of approximately 500-600 single-wire profiling saws, primarily serving the high-end stone processing market.

The global Single Wire Profiling Saw market size was estimated at USD 117.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.60% during the forecast period.
