Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Single Zone Ductless Systems competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Single zone ductless system is a split air conditioning system that does not require traditional ducts. It is mainly composed of an indoor unit and an outdoor unit, and is used to provide independent cooling or heating functions for a single space (such as a house, office or shop). The system connects indoor and outdoor units through refrigerant pipes and uses variable frequency compression technology to achieve fast and efficient temperature regulation, while avoiding energy loss and installation complexity of duct transmission in central air conditioning systems. Compared with multi-zone systems, single-zone ductless systems are easy to install, low in cost, and easy to maintain. They are suitable for local air conditioning upgrades, new air conditioning needs, or building structures that are inconvenient to install ducts. It is one of the energy-saving air conditioning solutions commonly used in modern homes and light commercial places.

The global Single Zone Ductless Systems market size was estimated at USD 11525.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.30% during the forecast period.
