## Abstracts

Sintered stone is a type of manufactured stone made from a mixture of natural minerals, such as quartz and feldspar, and pigments. The mixture is then compressed and heated at extremely high temperatures, up to 1200°C, resulting in a dense, durable material that is resistant to scratches, stains, and heat. It is made by grinding and compressing natural minerals such as quartz, porcelain, and glass under high pressure and temperature. The resulting mixture is then poured into a mould and fused together to create a solid slab of sintered stone.

The global Sintered Stone market size was estimated at USD 280.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.80% during the forecast period.
