Report Overview

Sirolimus eluting stent is a medical device used for coronary intervention treatment. The drug coating of the stent contains sirolimus (also known as rapamycin), which is an immunosuppressive drug. The drug will be released onto the vascular wall around the stent, thereby inhibiting intimal hyperplasia and reducing the risk of vascular restenosis. Sirolimus drug coated stents work in two ways: metal stents provide mechanical support to maintain vascular patency; Drug coating releases sirolimus, inhibits vascular intimal hyperplasia, and reduces the possibility of vascular restenosis.
